

The QuickLocate Desktop Geocoder application is a standalone tool with the ability to calculate hundreds of geocodes every second. This application, suited to all Desktop formats for users, inputs an unlimited number of addresses, allowing multiple inputs of address formats for data-rich, multi-faceted geocoding. With advanced geocoding capabilities, QuickLocate Desktop Geocoder can take in environment factors and address data to provide users with insights to support their business needs.

## Sample applications

- ◆ Identify customer locations and analyse consumer experience based on their location
- ◆ Analyse boundary locations to reveal spatial patterns

## Formats

- ◆ Text document such as CSV, TXT, Excel
